Investment Objective

The investment objective is the preservation of capital.

The client assumes minimal fluctuations of the invested capital and agrees to support minimal fluctuations in the value of the investment.

Recommended time horizon: minimum 1 - 3 years

Conservative portfolio with dynamic management that invests in a global universe of assets according to risk control criteria.

Portfolio risk control establishes a maximum annual volatility of 5%.

The investment is mainly made through ETFs, although it may include investments through collective investment instruments.

Management Insight

The latest inflation data in the Eurozone showed an acceleration, standing at 3% year-on-year, marking a level not seen since 2011. On the other hand, business confidence, although at levels below the last reported data, remains at elevated levels and in line with strong economic growth, with the composite PMI at 59,5, the services PMI at 59,7 and the manufacturing PMI at 61,5. In reference to the United States, inflation data remain in line with expectations, 5.4% year-on-year and 0.5% month-on-month. Confidence indexes also showed a slowdown in confidence but remained at levels of strong economic expansion, with the composite PMI at 55.4, manufacturing PMI at 61.2 and services PMI at 55.2.

In the United States, the expected Jackson Hole Fed meeting was held, at which Powell delivered an ambiguous speech. He indicated that the tapering phase of purchases could begin this year. However, this would not imply an immediate interest rate hike. Interest rate hikes could be seen later, but it will depend on macroeconomic variables at that time. As for the 10-year US Treasury yield, there has been little movement, moving from 1.22% to 1.31%.

In Europe, although during the month we have seen easing in government curves, the last days of the month have been marked by high inflation data and comments from several ECB members signaling that the discussion on when to start withdrawing the emergency mode of ECB stimulus should begin. The yield on the German 10-year government bond has risen from -0.46% to -0.38%, touching levels of -0.50%.

On the credit side, there have been no strong movements. Overall, with the support of Central Banks, credit seems to be sustained.

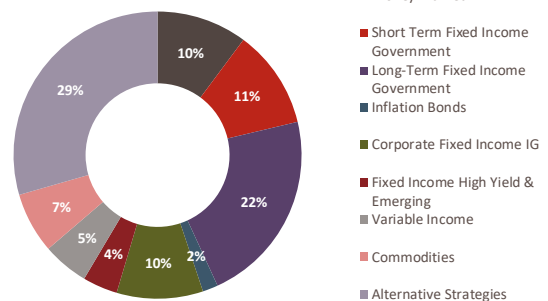

In terms of markets, Wall Street indexes have been boosted at the end of the month due to the Fed Chairman's speech. This has led to rises in all indexes and record highs such as the S&P500, which has surpassed 4,500 points, with a monthly performance of 2.27% and a YTD of 20.41%.

Most European stock markets have also maintained an optimistic dynamic after Powell's speech. Thus, the Euro Stoxx 50 has a monthly performance of 2.62% and a YTD of 19.15%.

On the other hand, if we look at the performance of emerging markets, taking the MSCI Emerging Markets as a benchmark, with a monthly performance of 2.42% and a YTD of 1.35%, we see a great contrast with the benchmark indices of developed countries.
